- dataset primarily used for diabetes research,
- explore factors contributing to diabetes development

MISSING DATA

Glucose
0.65%

BloodPressure
4.56%

BMI
1.43%

SkinThickness
29.56%

Insulin
48.69%

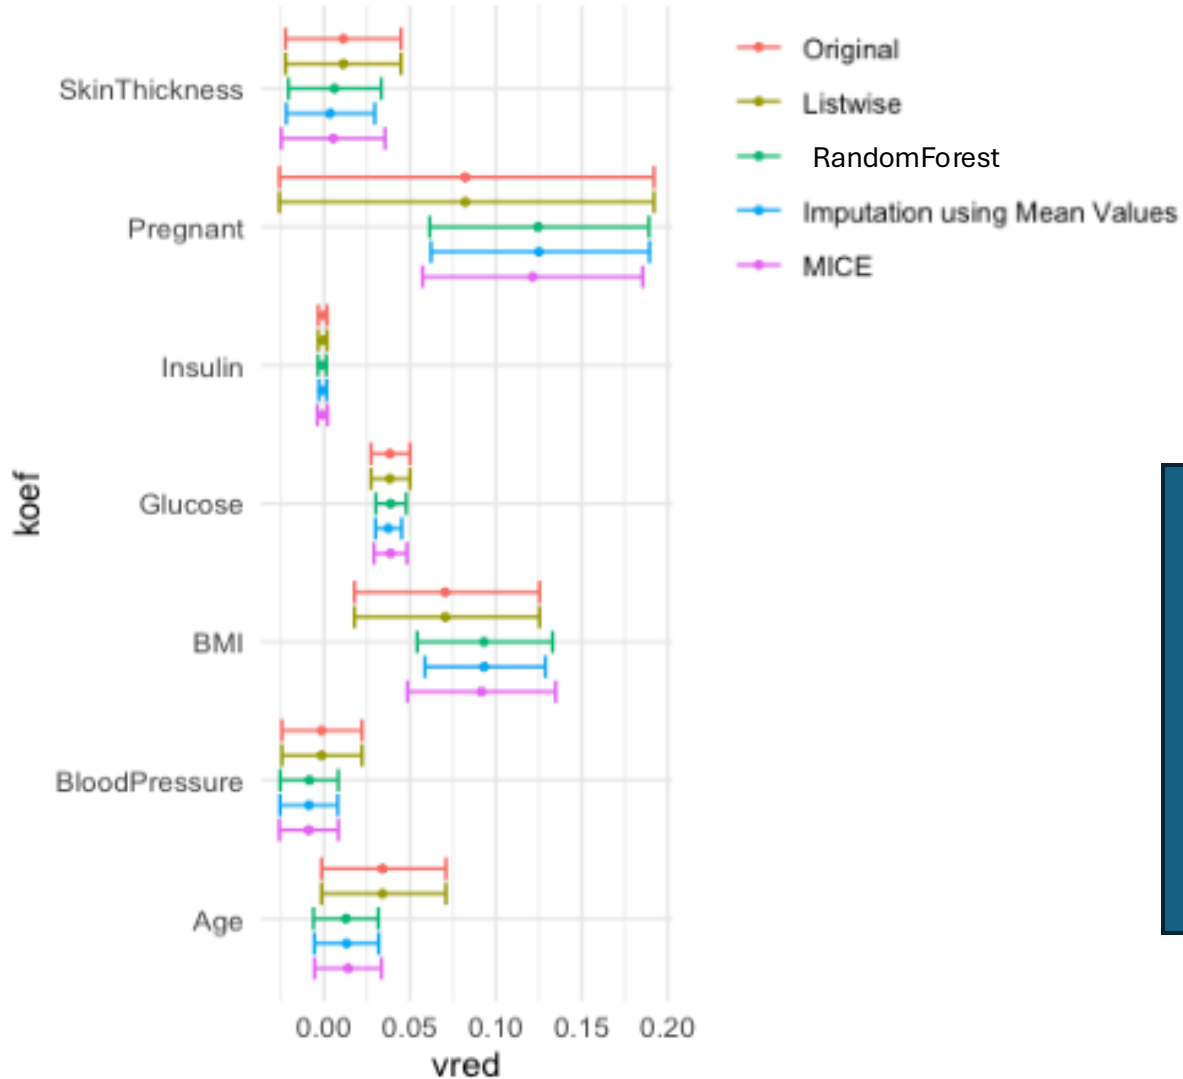

Number of all
woman: 768

- No missing data:
- Pregnant,
 - DiabetesPedigree
 - Age

MAR/NMAR

MISSING VALUE IMPUTATION

Based on the results of our analysis, we can divide the methods into two groups.

listwise or pairwise
deletion method

RandomForest,
Imputation using Mean Values,
MICE
